THE SCIENCE OF SMELL
Selling the chemistry behind holding tank treatments

Holding tank treatments use a variety of methods to eliminate offensive odors created as waste is broken down. Learn how each is best suited for the situation:

**CHEMICAL DEODORIZERS**

Chemical Tank Deodorizers are the most popular because they provide the best odor control in the least amount of time. They are inexpensive in the short-term and simple to use, and therefore great for the weekend warrior customer-base. They can be added to tanks that contain other treatments without cleaning the tank first. Star brite’s INSTAFRESH Tank Deodorizer goes a step further and lubricates valves and cleans sensors.

- **INSTAFRESH Pros:**
  - Easy to use & maintain
  - Great for infrequent RV use
  - Works fast to break down paper and waste

**BIO-ACTIVE DEODORIZERS**

Bio-Active enzyme treatments contain live aerobic bacteria that break down waste, reproduce, and crowd out anaerobic (odor-producing) bacteria. They are environmentally friendly and their toxicity is extremely low. Bio-active treatments begin breaking down sewage immediately, and unlike other treatments, they multiply and continue working long after treatment is complete. However, the microbes require a well-ventilated and residual free holding tank to survive. Bio-active treatments become more cost effective over time because of bacteria propagation. Star brite’s BIO ODOR bio-active formula digests both waste and paper.

- **BIO ODOR Pros:**
  - Eco-friendly formula
  - Digests both waste and paper
  - Long-lasting for the road tripper

**NITRATE DEODORIZERS**

Nitrate treatments provide an interesting alternative. Oxygen is vital to bacteria in the process of breaking down organic waste. When little air is present (as in most holding tanks), bacteria derives the oxygen from sulfates in the waste, which produces hydrogen sulfide (stinky!) gas. When nitrates are introduced, they act as nutrients for the bacteria, providing an alternative source of oxygen, which results in the production of nitrogen (odorless) gas. Nitrates are environmentally friendly, and are ideal for systems with less ventilation. They speed up the breakdown process and reduce odors. The tank must be free of residuals from other treatments. Star brite’s ODOR AWAY is also scent-free for those that are chemically sensitive.

- **ODOR AWAY Pros:**
  - Contains no formaldehyde
  - Safe for use even for chemically sensitive people
  - Get rid of solid wastes, as well as toilet paper

**5 Tips for Choosing the Right Treatment**

**Type:** Consider this first. There are various types to choose from (see left) and it will save a lot of time knowing which type to look for initially.

**Usage:** Weekend Warrior? Probably best to go with Instafresh, a chemical deodorant. In it for the long haul? Check out Bio Odor, a bio-active deodorizer.

**Composition:** Treatments that contain formaldehyde, however effective they may be, are horrible for the environment, and banned in several states. All of Star brite holding tank treatments are free of formaldehyde.

**Material:** For those that are chemically sensitive, consider choosing a product that is organic and biodegradable, such as Bio Odor or Odor Away.

**Compatibility:** Consider using Instafresh Holding Tank Treatment, as it will treat both black- and grey-water tanks. This will save money needing only one instead of buying two separate treatments.
Instafresh Holding Tank Treatment is a simple one-step, highly effective way to deal with an RV’s holding tank that eliminates the need for multiple chemicals. Quickly breaks down waste to remove potential odors, while leaving a light, pleasant scent behind.

FEATURES:
- Formaldehyde-Free, non-staining, biodegradable formula
- Latest technological lubricants keep drain valves from sticking
- Fresh pine scent controls holding tank odors
